About SINSIN Pharm

"We will fill your life with health and happiness."

Founded in September 1959, SINSIN PHARM prioritized the founding spirit of "Pain Care for the peoples" and focused its capabilities on the field where it can do best. As a result, we have established a firm position in external use medicine based on the TDDS that has given us the honorable name "Prestigious Manufacturer of the Patch".

Having been with the customers every step of the way, SINSIN PHARM intends to continue its commitment befitting our spirit of Patch by reinforcing its product lineup centered on plasters (patches) and aerosols for the OTC market and concentrating distribution and export to expand the sales channels.

SINSIN PHARM plans to lead the high-value-added plaster for the ETC market and accelerate its preparation to help people live a life full of health and happiness without pain.

Furthermore, we will continue to develop next-generation new drugs based on our technology to expand the business portfolio and advance to become a global healthcare company.

SINSIN PHARM has left its mark as a manufacturer specializing in transdermal pharmaceuticals for over 60 years.

Please look forward to it with interest for the future of SINSIN PHARM as it marches forward further and leaves a deep footprint in the future.

Thank you.

CEO and President, SINSIN PHARM
ByoungKi Lee

Factory Introduction:

Sejong Factory has a total floor area of 22,452 m² and consists of two production buildings, an administration building, and other subsidiary buildings.

Its facilities are certified by Good Manufacturing Practice (GMP), releasing only products verified for safety and quality through employee training and standardized inspection methods.

Many of its products, including patches and other external use medicines are recognized for excellent product quality at domestic and overseas that currently exported to more than 30 countries, including the US. The production processes of the Smart Factory and employees who are thoroughly trained internally and externally and are enthusiastic about every process are producing the best products.

R&D : SINSIN PHARM Central Research Center

SINSIN PHARM's Central Research Institute focuses on research on a new Drug Delivery System (DDS) to deliver drugs into the body effectively.

We have conducted countless research studies on the Transdermal Drug Delivery System (TDDS) over the last 63 years since our development of Natural Rubber-based, solvent-free plaster product for the first time in Korea.

Today, we are channeling our efforts into research on next-generation technologies for the development of new drugs of the future such as Microneedle-based Microsphere Patch, a patch that controls the absorption rate in the body depending on the crystal structure of the active ingredients, and BOV-IN (Bag on Valve Inhaler) that delivers the drugs into skin and mucosa safely.

"SINSIN PHARM's Central Research Institute" is at the center of technological capabilities of SINSIN PHARM. Boasting of excellent research talents and broadly established R&D partnerships, the Central Research Institute will grow into a global healthcare company and become a reliable partner for the healthy future of mankind
